DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed on 8/23/2005 have been fully considered but they are not persuasive. Specifically, Fig. 5, the pocket regions 7 and 17 extend within the source regions to underneath gate electrode. They do not extend directly underneath the gate electrodes, but as shown in the figure, they do extend underneath the gate electrodes. Furthermore, they don't extend in a third depth that is deeper than the first depth. However, they do extend in a third depth that is equal to the first depth.

Allowable Subject Matter

1. Claims 1, 3-6 and 8-10 allowed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 11-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Shinohara (6,245,603) in view of Wada et al. (JP 2003-017578) further in view of Oda et al. (5,945,710).

Regarding Claims 11-19, Shinohara discloses in Fig. 3A and Fig. 4A-4C, it is disclosed a P-type semiconductor substrate 110, gate electrode on top of the gate oxide layer which are both not labeled, source/drain layer 123a which extends from the source/drain side to underneath the gate. Also, on top of the source-drain layer, there are pockets of lightly doped layers 144a.

Art Unit: 2826

Shinora fails to disclose the required pocket regions and the required conductivity/doping requirement. However, Wada et al. disclose a semiconductor device and its manufacturing method where in Figs. 3 and 5 the required pocket regions are disclosed. Furthermore, Oda et al. disclose a semiconductor device with doped contact impurity regions having particular doping levels where in Figs. 15-17 and 23 the required doping/conductivity structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required pocket regions and doping/conductivity structures in Shinohara as taught by Wada et al. and Oda et al. respectively in order to have a semiconductor structure with ease of manufacture.

Conclusion

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
